# Exercise sheet 12: Quartet Tree Puzzling

Exercise 1 - Quartet Tree Basics
1a)
How many possible quartet trees can you produce with six taxa of any specific topology?
Hide
Formula
Solution
1b)
What does a set of quartet trees tell you, in a biological sense?
Hide
Formula
$\Box$ It tells you which of the quartet trees are likelier than others.
$\Box$ It tells you which of the taxa are closer related than others.
$\Box$ It tells you the exact distance between each set of four taxa.
Solution
$\Box$ It tells you which of the quartet trees are likelier than others.
oxtimes It tells you which of the taxa are closer related than others.
$\Box$ It tells you the exact distance between each set of four taxa.

# Exercise 2 - Quartet Tree Reconstruction

You are given a set of quartet trees and an initial topology. You want to include a new taxa P. Where does the P belong to? (We are only using five quartet trees, but there are more possible as you determined in exercise 1 a.)

Quartet Trees:
$egin{aligned} N_1(P,Y Q,W) \ N_2(X,P Z,W) \ N_3(X,Z P,W) \ N_4(P,Y Z,Q) \ N_5(X,Z Q,P) \end{aligned}$
Initial Topology:
The letters a-g denote the edges in the topology and represent the <b>violation counter.</b>
2a)
Add $N_1(P, Y Q, W)$ to the initial topology. How does the violation counter look after adding $N_1$ ?
Hide
Solution
<b>2b)</b> Add $N_2(X, P Z, W)$ to the initial topology. How does the violation counter look after adding $N_2$ ?
rad 1/2(11,1  2,117) to the limital topology. How does the violation counter rook after adding 1/2.
Hide
Solution
2c)
Add $N_3(X, Z P, W)$ to the initial topology. How does the violation counter look after adding $N_3$ ?
Hide
Solution

2	d	)
٨	A	

Add  $N_4(P,Y|Z,Q)$  to the initial topology. How does the violation counter look after adding  $N_4$ ?

#### Hide

Solution

#### **2**e)

Add  $N_5(X, Z|Q, P)$  to the initial topology. How does the violation counter look after adding  $N_5$ ?

## $\mathbf{Hide}$

Solution

#### **2f**)

To which edge will taxon P be attributed, after adding quartet trees  $N_1$  to  $N_5$ . What is the closest taxon to the newly added taxon P?

## $\mathbf{Hide}$

**Solution** Edge - "C" Taxon - "Y"
